Print page - Previous page

- You can search under different parameters depending on what you want to see
  - **Bookings no.:** fill in the Eucon reference (full ref) eg RTMDUB123456 to search on shipment ref no
  - **Customer reference:** fill in your own reference to search for a specific shipment(s)
  - **ID no.:** fill in your Web booking ID nr if you have made a webbooking (instead of the Eucon bookings no)
  - **Container/Unit:** fill in the container number to search for a particular container nr
  - **Period (ETS dates):** fill in the ETS from / to date you want to search – if nothing is filled in system will automatically search 2 weeks in the past until 2 weeks in the future).
  - **Transport Status:** you can filter for shipments which the loading and/or delivery is confirmed (transport date agreed with customer / not confirmed (transport date note agreed with customer yet)
  - **Search:** can leave as shipments only unless you want to search for Web bookings which are not confirmed in the system yet as a shipment

Eucon are members of the Smart Freight Centre.

- The Smart Freight Centre adopted the Global Logistics Emissions Council Framework as the preferred way of measuring greenhouse gas emissions from shipping and logistics.
- Within this Framework, Eucon has chosen to work with “Well to Wheel” calculations. This method provides the most complete and accurate way to measure energy consumption and greenhouse gas emissions.
- Well to wheel analysis is a comprehensive method for assessing energy efficiency and emissions. It considers the total energy consumption and greenhouse gas emissions throughout the entire life cycle of an energy source. The GLEC Framework remains as the gold standard for logistics emissions accounting.

Here is a useful link to a short clip about the Smart Freight Centre and the GLEC Framework.”

If you have any other questions on Co2 Emissions calculations please contact your local Eucon representative.
